

CD Team - Data Security

A recent BBC News article announced the future introduction of fines of up to £500,000 for serious data security breaches and information loss. The new rule from the Information Commissioner's Office is expected to come into force in the UK on 6 April 2010:

<http://news.bbc.co.uk/1/hi/technology/8455123.stm>

CD Team offers a range of data security and anti-piracy solutions which can reduce the chances of data loss and data copying dramatically and even eliminate it completely. The level of security you want to apply depends on how critical or sensitive your data is and how much you need to protect it from unauthorised access.

	<p>» SECURE DISCS for access security and data protection. Secure discs such as Verbatims SecureSave DVDs and AutoSave Encrypt, are a simple and cost effective way to store and distribute confidential information. If the disc is lost or stolen, it is protected by an enforced password and 256-bit Advanced Encryption Standard (AES) encryption. If the disc is copied onto a standard blank disc or a hard disc drive the encrypted data will become inaccessible. Each disc contains the security application so in only a few clicks, and without installing any software on your PC, you can record, protect, encrypt and archive your sensitive data.</p>
	<p>» SECURE USBs for portable data security and content protection. Secure USB drives are the perfect compact and versatile way to save your sensitive data and protect it from unauthorised access. CD Team has a selection of secure USBs ranging from single secure partition with enforced password protection and hardware-based, 256-bit Advanced Encryption Standard (AES) encryption to advanced devices with FIPS 140-2 level 2 certification and inbuilt drive termination software. As above each USB device contains the security application.</p>
	<p>» SECURE DUPLICATORS for secure data copying. Secure Duplicators with lockable entry, can custom print your cd, dvd or blu-ray discs with your company details and logo, individually barcode or serial number them or add an individuals name to every disc produced so that you can track each one. This identity information can also be embedded into the disc content (known as fingerprinting). For regular high volume data encryption, AutoSave Encrypt Pro enables discs to be pre-printed with your logo and supplied in bulk or used as part of our secure duplication service.</p>
	<p>» SECURE HARD DRIVES for secure data storage. Protecting the data that is stored on external hard drives is of major concern to many organizations and there is an increasing requirement for the devices to be robustly secure. Verbatim's 128-bit Advanced Encryption Standard (AES) hardware encrypted 2.5" hard disk drive fulfils this need, offering real-time full disk encrypted storage with no loss of performance during data transfer.</p>
	<p>» SECURE DISC DESTRUCTION for safe data disposal. Don't leave discs lying around in temptations way. If you have important data to protect, disposing of it can be a real issue. Don't take any unnecessary chances; CD Team can dispose of all your discs using heavy duty disc shredders or provide you with a disc shredder or professional degausser for use in-house.</p>
